

Professional Summary

Software Engineer with 4+ years of experience designing and shipping backend systems, distributed data platforms, and serverless APIs. Strong expertise in **Python and Go** with proven experience building **high-throughput services** (sub-millisecond lookups across 2B+ records), leading platform modernization efforts, and delivering security-critical tooling under production incidents. Proven ownership from system design through production deployment.

Experience

Senior Associate Software Engineer, SonicWall – Remote

Aug 2023 – Present

- **Telemetry Ingestion Service (Go Microservices):** Designed and built a **two-service streaming pipeline** (ingestor + store) in Go for collecting firewall telemetry from millions of devices. Implemented **zero-buffer multipart streaming**, spool-based async storage with drain workers, per-IP rate limiting, GeoIP resolution, and atomic file writes. Deployed as independently scalable containers with full CI/CD and load testing.
- **Credential Auditor API (Go/AWS):** Designed and built a **serverless breach detection system** processing **2B+ credential hashes** using Bloom filters enabling **sub-millisecond lookups**. Implemented dual-mode API (encrypted + pre-hashed workflows), bulk ingestion (16K-item batches), and secure **mTLS-based authentication**. Deployed on AWS with containerized CI/CD pipeline and auto-scaling infrastructure.
- **Security Incident Response Tool (Go + WASM):** Delivered a **zero-dependency browser-based** sanitization tool during a live security incident to remove sensitive data (VPN keys, credentials, RADIUS secrets) from firewall configurations. Built **offline-capable WASM runtime** with CLI-based remediation generator. **Recognized with CEO spot award.**
- **Distributed Telemetry Processing Platform (Python/RabbitMQ):** Architected **event-driven** telemetry system with multiprocessing workers, persistent **RabbitMQ queues**, retry mechanisms, and observability endpoints. Designed for **fault tolerance** and secure execution of telemetry queries using **rbash sandboxed runtime**.
- **Enterprise Migration Platform (Full-Stack Modernization):** Rewrote legacy Perl/CGI system into **FastAPI + React (TypeScript)**. Implemented **Redis-based session management**, multi-vendor configuration parsing, and end-to-end test coverage. Improved system modularity and deployment reliability.
- **TSR Analysis Platform (Architecture Refactor):** Led decomposition of a monolithic tool into modular services. Extracted a reusable parser library with a **declarative model-driven architecture** (50+ typed models, 280+ auto-parsed fields). Improved maintainability and enabled reuse across internal systems.

Associate Software Engineer, SonicWall – Bengaluru

May 2022 – Aug 2023

- Maintained and extended enterprise migration tools for firmware compatibility across new device generations.
- Built automation utilities that reduced manual onboarding effort and improved system reliability.

Software Developer, Auton Systems Pvt. Ltd – Maharashtra

Sep 2021 – May 2022

- Developed IoT and embedded systems using Raspberry Pi and ESP32.
- Worked on hardware–software integration for sensor-based systems and automation workflows.

Skills

Languages: Python, Go, JavaScript/TypeScript, C, Bash

Backend & Distributed Systems: FastAPI, Django, Go (net/http), RabbitMQ, Redis, PostgreSQL, MongoDB, SQLite, DuckDB

Cloud & DevOps: AWS (ECS, Fargate, ALB, SSM, ECR, KMS), Docker, Terraform, Nginx, GitLab CI/CD

Systems & Security: mTLS, Bloom Filters, Cryptography (AES/3DES), SAML, LDAP, Distributed Systems Design

Architecture & Practices: Microservices, REST API Design, Observability (metrics/logging), Concurrency (multiprocessing/goroutines), AI-assisted development

Frontend: React, Vue.js, TypeScript, WebAssembly

Education

Mumbai University, B.Sc. in Computer Science — CGPA: 8.0/10.0

2018 – 2021

Certifications & Achievements

- **Spot Award by CEO** (Oct 2025) — Critical security tool delivery during company-wide incident
- **Certificate of Recognition** (Jan 2024) — Self-initiated platform architecture refactoring
- Developing Serverless Solutions on AWS | Building Data Lakes on AWS | AWS Well-Architected Best Practices
